Release Note - ID3 Reporting v4.0

ID3 Reporting introduces advanced AI-assisted and automated compilation across the entire daily report, reducing manual input and accelerating the reporting process. Combined with a completely redesigned, more intuitive UI/UX, these enhancements help users find information faster, minimize errors, and move from rig data to an approved DDR in a fraction of the time.

BUSINESS IMPACT

ID3 Reporting reduces DDR preparation time by up to 50% through automated and AI-assisted data compilation. Greater data granularity, more accurate coding, and more relevant operational comments improve reporting quality and reliability. Reduced manual input minimizes errors, while better data consistency enables more effective performance benchmarking, flat-time analysis, and end-of-well evaluations across the drilling fleet.

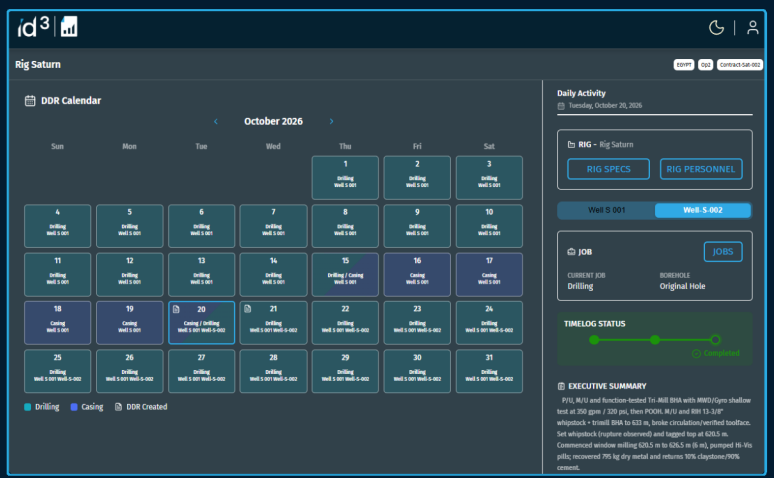

DASHBOARD UPDATES & NEW FEATURES

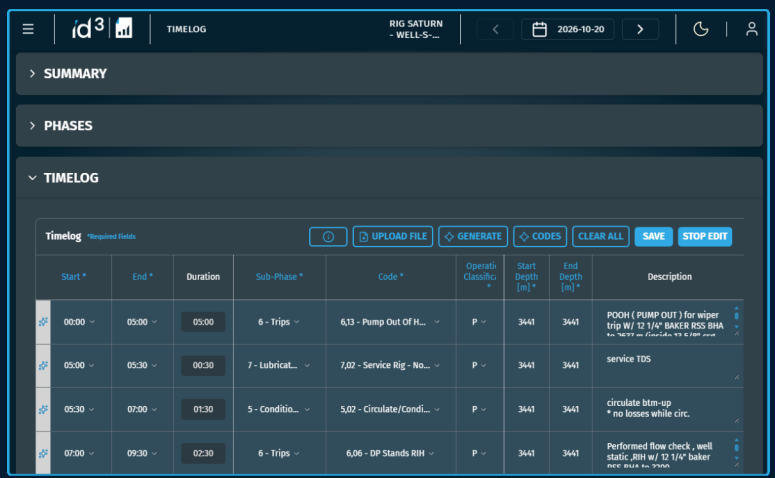

- **AI-Assisted Compilation:** The timelog is generated from rig sensor data, IADC codes are suggested from driller comments, and third-party DDR files are read and converted into timelog rows. Executive summaries are written in one click from the timelog.
- **BHA & Casing Auto-Completion from Documents:** BHA and casing reports are automatically read to populate the relevant tables, including BHA, bit, BHA elements, and casing data. Missing or invalid values are highlighted for quick review and correction.
- **Interactive DDR Calendar**: A new entry point for each rig, colour-coded by job and well. It shows the timelog status of every DDR at a glance and gives one-click access to the daily report, the asset data and the Excel or PDF report download.
- **New Daily Drilling Report Experience**: The DDR is reorganised into 12 discipline tabs with collapsible sections and smart tables, so every piece of information is easier to find, compile and review.
- **Completely Redesigned UI/UX:** A new, user-friendly interface rebuilt from the ground up. A consistent layout across all pages, guided tables and light and dark themes make daily reporting faster to learn and easier to use.

OPERATIONAL ENHANCEMENTS

- **More Automatic Calculations and Inherited Data**, from durations, cumulatives, TVD and dogleg to rig specifications that flow directly into the daily report.
- **Automatic Descriptions from IADC Codes**, filling the timelog description with the standard template of the selected Level 3 code, configurable per customer.
- **Copy From Previous for data that changes little from day to day**, such as marine data, DDR approvers and crew rosters.
- **Reorganised Configuration Hub**, bringing the existing management pages for rigs, wells, boreholes, contracts, jobs and libraries together in a single, clearer setup area.
- **Guided Tables with Built-in Validation**, with field descriptions available from each table and required fields highlighted in red before saving.

Applicability: ID3 Reporting is designed for both Operators and Drilling Contractors, supporting onshore and offshore operations across Oil & Gas, Geothermal, CCUS, and other drilling applications.
